AutoMATE is the industry-leading tool for MATE analysis of fuel, oil, coolant, transmission fluid, brake fluid or ethanol content of gasoline. AutoMATE is designed to provide fast answers to the fundamental questions of fuel quality testing. AutoMATE is a unique and rapid means to: AutoMATE is used and accepted by industry and government. This includes organizations such as the Council on Bonded Petroleum Products, the Association of European Petroleum Distributors, the European Automobile Manufacturers Association, the Rubber Manufacturers Association, the Texas Department of Agriculture, the DOD Fuel Quality Center and many more. AutoMATE has been used by more than 800 different companies worldwide. AutoMATE's MATE II technology was first launched in 1981 as a new approach to MATE analysis. Traditional methods for analyzing gasoline - by gas chromatography, mass spectrometry or infrared spectrometry - gave an answer after a period of time. MATE II instead provides a prompt and reliable answer. AutoMATE's MATE II technology is the outcome of many years of research and development. It offers a unique, highly automated method to analyze a wide range of fluids with no loss in response time, which has been proven to be the most accurate means available for MATE analysis. From its inception, every AutoMATE has been manufactured from the highest quality materials to deliver exceptional performance and reliability. AutoMATE analyzers are tested on a regular basis for wear and tear as well as any condition that might decrease product performance. In addition, each instrument is also tested for correctness by using a known sample at each step until all checks have been passed correctly. These quality tests are performed by both AutoMATE and its customers on a regular basis to maintain the equipment's performance. AutoMATE analyzers can be found in 40 countries. AutoMATE is used in over 800 different service stations, 5500 different service stations including attached retail outlets, government agencies, oil companies, automotive manufacturers/suppliers and the general public. AutoMATE has been used by all major oil companies including Exxon Mobile (ExxonMobil), Shell (Shell), ARCO (Arco), Chevron (Compania de Petr6leos de Venezuela S.A.), British Petroleum (BP) and Mobil Oil.

AutoMATE analyzers are used by all major oil companies including ExxonMobil, BP, Shell, Mobil, Chevron, Valero and Texaco. AutoMATE analyzers are approved by the Council on Bonded Petroleum Products (CBPP) in the United States. They are also approved by similar organizations in Europe including the European Automobile Manufacturers Association (ACEA). The Association of European Petroleum Distributors recommend AutoMATE for MATE II analysis of fuels. The UK Department for Transport uses AutoMATE to analyze gasoline quality at service stations across Britain. The German Federal Ministry of Economics also use AutoMATE to ensure that fuel quality is consistent across Germany.
